## Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### ***Specification***

The disclosure is objected to because of the following informalities: In column 6, line 1, "140" should be "14". Appropriate correction is required.

The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

### ***Claim Objections***

Claims 29,30,42,45,59 are objected to because of the following informalities: It is unclear as to how one "calculates" or "measures" an image. It appears that the image data is obtained and an image is obtained from the data. Appropriate correction is required.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 28,31-34,40,46-49,54,56,59,64 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by Robinson. The claims are directly readable on Robinson which discloses a coaxial cable placed within a catheter in order to image blood vessels in a body using MRI. The probe is coupled to an MRI system which inherently includes the structure of the controller and processor and means for generating fields as set forth. The structure set forth by Robinson inherently is capacitively coupled to an EM

field generated by the EM radiation. The structure of the probe of Robinson inherently provides a guidewire in that the coaxial cable is capable of functioning as such.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 29,30,41-45,50,51,53,55,57-63 rejected under 35 U.S.C. 103(a) as being unpatentable over Robinson. Robinson which discloses a coaxial cable placed within a catheter in order to image blood vessels in a body using MRI. The probe is coupled to an MRI system which inherently includes the structure of the controller and processor and means for generating fields as set forth. Applicant discloses that it is well known in the art to determine antenna location from the detected MR signals. Furthermore, it is old and well known in the art to repeatedly obtain the MR signals for use in imaging a part of a patient. It would have been obvious to one skilled in the art to have determined antenna position and orientation from the detected signals using known data processing techniques in order to accurately determine if the image is obtained from a desired location in the patient. Furthermore, it would have been obvious to one skilled in the art to repeatedly acquire the data in order to provide a high-resolution image as is also a well known expedient in the art.

***Allowable Subject Matter***

Claims 1-27 are allowable over the prior art of record.

Claims 35-39,52 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
